Appl. No. 10/820,855

Amendment dated: August 8, 2006

Reply to OA of: April 11, 2006

This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims:

1(Original). An under bump metallization structure applicable to be disposed on bonding pads of a semiconductor wafer, wherein a passivation layer covers the wafer and exposes the bonding pads, the under bump metallization structure comprising:

an adhesive layer formed on the bonding pads;

a first barrier layer disposed on the adhesive layer;

a wetting layer formed on the first barrier layer; and

a second barrier layer disposed on the wetting layer, wherein a material of the second barrier comprises tin and nickel.

2(Original). The structure of claim 1, wherein the quantity of the tin is smaller than the quantity of the nickel.

3(Currently Amended). The structure of claim 1, wherein the first barrier layer is a comprises nickel-vanadium or nickel layer.

4(Original). The structure of claim 1, wherein the wetting layer is a copper layer.

Claim 5(Canceled).

6(Currently Amended). The structure of claim 1, wherein the wetting adhesive layer is a comprises titanium layer.

Appl. No. 10/820,855

Amendment dated: August 8, 2006

Reply to OA of: April 11, 2006

7(Original). The structure of claim 1, wherein the thickness of the second barrier

layer is ranged from about 50 µm to about 80 µm.

8(Currently Amended). A semiconductor wafer applicable to a flip chip device,

comprising:

an active surface;

a plurality of bonding pads formed on the active surface;

a passivation covering the active surface and exposing the bonding pads;

a first electrically conductive layer formed on the bonding pads; and

a second electrically conductive layer formed on the first electrically conductive

layer, wherein the second electrically conductive layer is a tin-nickel layer comprises tin

and nickel.

9(Original). The semiconductor wafer of claim 8, further comprising a plurality

of bumps formed above the bonding pads and attached to the second electrically

conductive layer.

10(Original). The semiconductor wafer of claim 8, wherein the second

electrically conductive layer is extended above the active surface.

11(Original). The semiconductor wafer of claim 8, further comprising a dielectric

layer covering the second electrically conductive layer and exposing a portion of the

second electrically conductive layer to form a redistributed pad.

12(Original). The semiconductor wafer of claim 11, further comprising a bump

formed on the redistributed pad.

Appl. No. 10/820,855

Amendment dated: August 8, 2006

Reply to OA of: April 11, 2006

13(Original). The semiconductor wafer of claim 8, wherein a material of the first electrically conductive layer is selected from the group of aluminum, titanium, titanium.

vanadium alloy, titanium-tungsten alloy, copper, nickel-copper alloy, and nickel, nickel-

vanadium alloy.

14(Original). The semiconductor wafer of claim 8, wherein the first electrically

conductive layer comprises a titanium layer, an aluminum layer, a nickel-vanadium alloy

layer and a copper layer and the titanium layer is directly attached to the bonding pads.

15(Currently Amended). The semiconductor wafer of claim [[8]] 11, wherein a

material of the dielectric layer comprises polyimide.

16(Original). The semiconductor wafer of claim 8, wherein the quantity of the tin

is smaller than the quantity of the nickel.

Claim 17(Currently Amended). The semiconductor wafer of claim 8, wherein the

thickness of the lead-alloy second electrically conductive layer is at least larger than

ranged from about 50 µm to about 80 µm.

18(Currently Amended). The semiconductor wafer of claim [[8]] 11, wherein a

material of the dielectric layer comprises Benzocyclobutence.

Claim 19(Canceled).
